WoRisGo Executive Round Table | Benchmarking Corporate Physical Security

WoRisGo convened senior security leaders from leading MNCs and major Indian enterprises in Bengaluru for a closed-door executive Round Table focused on redefining benchmarks across corporate physical security.

The dialogue centered on a clear imperative: future-ready enterprise security cannot operate in silos. Navigating today's threat landscape demands a synchronized convergence where intelligence, technology, physical security, crisis resilience, and executive protection operate as an integrated engine.

Key thematic pillars addressed during the session:

- Operating Model Convergence: Breaking operational silos to align intelligence, physical guarding, technology,and crisis response into board-level strategy.
- Resilience in VUCA Environments: Maintaining business continuity through severe disruptions, systemic shocks,and evolving operational risks.
- Modernizing Ground Defense: Tactical focus on perimeter security, rigorous access control, supply chain governance, and workforce upskilling.
- Talent, Tech & Governance: Establishing data-driven security metrics while navigating stringent compliance frameworks.

A sincere thank you to all participating leaders for their candid contributions and actionable perspectives. The consolidated insights will be released shortly in the upcoming India Corporate Physical Security & Man-Guarding Benchmarking Report.
